# Block Passing Game

- Block Passing Game is a fun game to play where player need to pass the blocks without touching them.

- There is one simple rule that player have to follow and that is if the block touches the character then that will be end of the game.

HTML FILE

- In this Game there is div id = "game". Every process of the game is going to be inside this div.

- There are two more div id which are "block" and "character" inside the game div.
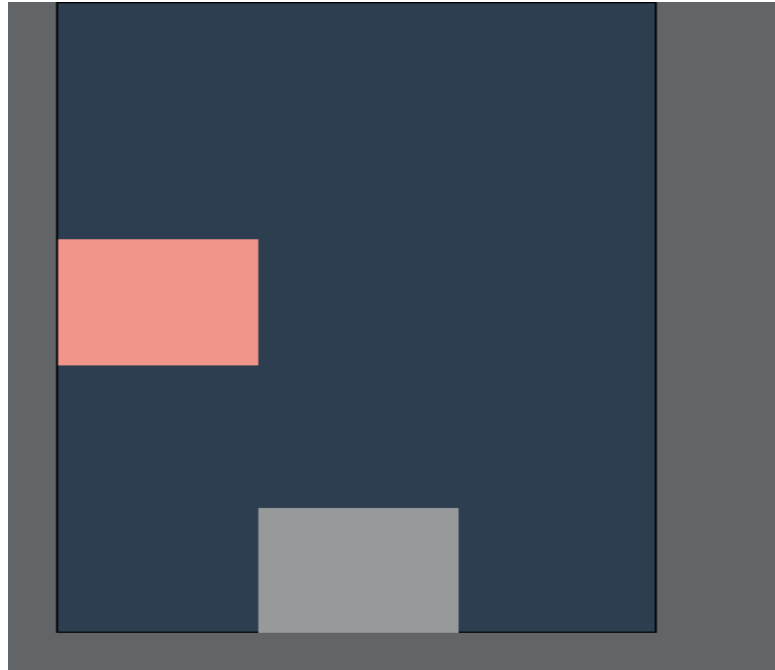

CSS FILE

- In CSS there is a designing of #game, #character, #body and many other characteristics.

- Additionally, there is an animation of the block that will be sliding down towards the character.

JS File

- Firstly, There are two functions moveleft() and moveright() which will get the left position of the character and remove and add 100px depends on the function.

THANK YOU
